

MELCO

About 'Roon Ready' for MELCO

- As Roon requires specific processor chipset for 'core', MELCO won't be 'Roon core' or 'Roon server'.
- Update (4.04b) will make MELCO's USB-DAC transport feature as 'roon ready' transport.
- While MELCO is working as Roon Ready USB transport, MELCO won't accept any playback requests from UPnP AV/OpenHome Controller App.
- We recommend to turn off Media Server for customers who want to use Roon Ready feature, because on the Roon system, all metadata will be managed by Roon Core.
- Customers can use MELCO's internal storage as a source. All tracks will be sent to Roon Core once for processing and be sent back to MELCO to play.
- TIDAL/qobuz can be managed by Roon and play on MELCO
- Customer can utilize the high quality volume control of Roon core by setting DSD playback mode as PCM.

Roon Ready Mode

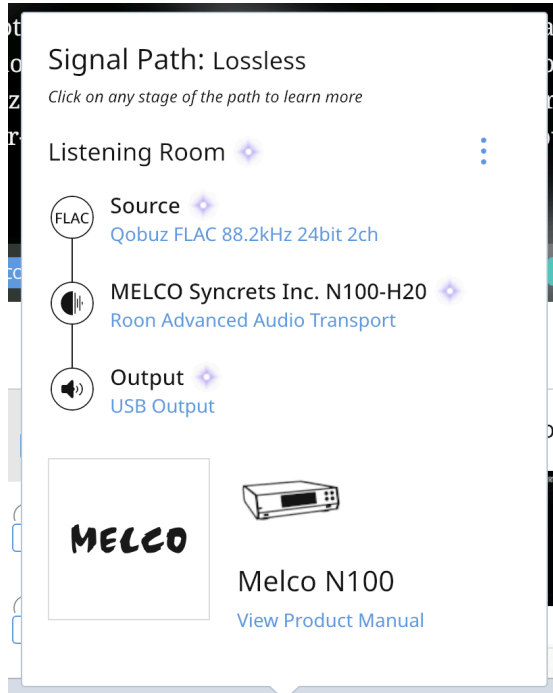

Information is defined by Roon
* different from MELCO's existing format

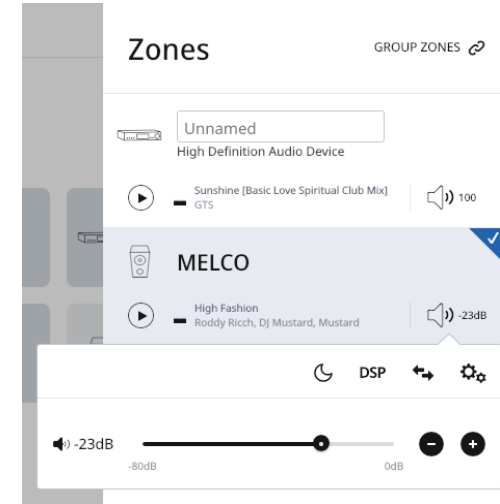

Roon Ready mode sign

On the Roon Controller/App

* Picture was made using prototype.

DSD Playback Mode Setting also be used by Roon
By set to PCM mode, Volume Control on App available.
